(Junior) Mobile App Developer (m/f/d)

jusst.engineering is an engineering studio specializing in embedded systems and mobile app development. We serve customers around the globe in the fields of contemporary audio & video streaming, IoT for residential applications, robotics and vision solutions.

The apps we are developing are custom control apps for embedded systems and the vast majority of our projects utilizes the Flutter framework, believing that its seamless cross-platform experience at native performance is the way to go.

To further grow our engineering team, we are currently looking for smart people with a passion for application development.

Your tasks

- Develop and extend our Flutter-based mobile apps for iOS and Android
- Transfer UX design concepts into actual applications
- Participate in the team's code review process for highest code quality and frequent feedback
- Generate code documentation that is worth to be read
- Make use of git's capabilities for accurate code versioning and history tracking

Your skills and qualifications

- Flutter - or the will to learn it
- Android
- iOS
- University degree in computer science or related fields
- Motivation to solve problems and to learn new things
- English language (internal language: usually German)

What you can expect from us

- An experienced and motivated engineering team
- Respectful and friendly manners
- An opportunity to learn and grow in varied and challenging projects
- Free choice of hardware and operating system
- A nice backyard loft style office in Hamburg Eimsbüttel
- Option for a part-time contract (minimum 32 hours)
- Flexible working hours & 30 days vacation

Your application

… should be an e-mail in which you shortly present yourself and your skills. It is important for us to get an impression of who you are and whether there is good chemistry.

If you are interested in the job, please write to **jobs@jusst.de**.
Your contact is Sebastian Scheel.
